

Dear Resident:

As part of the Flood Hazard Identification Program, Alberta Environment and Parks have hired Stantec Consulting (Stantec) to undertake the Priddis River Hazard Study. The goal of the Priddis River Hazard Study, and the Flood Hazard Identification Program, is to help reduce future flood damages and increase public safety for all Albertans.

To gather information for the Priddis River Hazard Study, Stantec survey crews will be working along 30 km of Fish Creek and 15 km of Priddis Creek in the Municipal District of Foothills, including Priddis and Priddis Greens. Survey crews will be collecting river channel and ground elevation data to support the creation of a new river hydraulic model, flood inundation mapping, and flood hazard mapping. The survey is expected to begin in September 2017, and carry on through to the end of November 2017.

More information about the Alberta Flood Hazard Identification Program can be found at www.floodhazard.alberta.ca. If you have any questions regarding the work, please contact Ruth DeSantis by email at ruth.desantis@gov.ab.ca, or by phone at (403) 355-2493.
